This is my summary submission

#### Recommendation:

The proposal to provide a super depot should not be accepted.  
A revised variation to provide for housing and social activities should be considered.  
I would welcome consultation with local communities and sporting organisations.

#### Summary:

I believe a super depot would not add value to the area. The area I live in is a deprived area. There is a lack of green spaces for children to play in and in the proposal there is very limited space outlined for sports and leisure. I have 2 young children and there is very little green space if any nearby where you can play. We have no garden and in our local school in Dublin 8 there is no green area also.  
I believe traffic will be an issue and this will impact on the elderly and children. The super depot should be moved to a more appropriate location.  
Please take a look at the basic facts. Dublin South inner city has the lowest ratio of green space per child in the country. Please see research from professor Gerald Mills in UCD.  
Please do the right action and think of the children.

Kind regards
